American HealthTech and Casamba Therapy Management Solutions Announce a Therapeutic Partnership

JACKSON, MISSISSIPPI – October 9, 2009 – American HealthTech (AHT) and Casamba Therapy Management announce a new partnership launching “smart” integration of the premier therapy software solution into the AHT electronic medical record (EMR).

American HealthTech is one of the largest providers of integrated long term care software in the country. The software system provides the industry with a comprehensive approach to efficiently manage clinical and financial requirements while balancing quality and care. Casamba has expertise and excellent capabilities in the area of clinical therapy documentation and reporting. These components are critical to a complete EMR solution.

“Casamba has mastered the complexity of rehab documentation. Capturing details of rehab therapy are key to appropriate revenue and clinical documentation required by a rigorous regulatory system. Our new partnership with Casamba offers our customers the best available solution on the market to accurately manage these processes” offers Devin Simmons, VP Sales and Marketing for AHT.

Partnering with Casamba allows full integration of the software for existing customers of both companies. “We have already announced this to current clients and it was received with great enthusiasm” says Bill Caldwell, CEO of AHT.

“This exciting new partnership represents a huge win for our two companies and, more importantly, our customers because it allows each company to focus on core competencies” says Sandro Grima, COO of Casamba.

While separately Casamba and AHT already lead the industry, as a combined force we will offer unprecedented levels of functionality, efficiency and service. Each solution is tailored to the unique needs of different departments. Grima says “With our plan for deep integration between the two products, customers will enjoy the benefits of using the best tools available for each job while at the same time reaping the benefits of seamless integration”.

About American HealthTech

For over 30 years, American HealthTech, an employee owned company, has provided long-term care clients with fully integrated clinical and financial software solutions. From admissions to assessments, care planning to quality assurance, over a quarter of the nation’s nursing homes rely on American HealthTech daily to deliver higher quality care and optimize business performance.
