

## Corporate Vital Signs lets you manage your business instead of it managing you!

These are busy times with many challenges. Timely availability of relevant operating information is critical to managing your organization. With Corporate Vital Signs, answers to your questions are available at your fingertips to better understand the status of your financial, clinical, and operational efforts. However, this powerful tool is more than just a fresh way to review reports. You can set your own performance benchmarks and have the system to alert you automatically when a threshold is crossed!

Corporate Vital Signs brings several benefits all in a single product:

- It is a fully customizable key performance indicator/business intelligence product;
- It has built-in links to American HealthTech's database, but can connect to others as well;
- It produces an on-target dashboard with full drill down capabilities to find root causes; and
- It comes with a very-easy-to-use ad hoc report generator for your power users and a more sophisticated one for your IT staff

Rather than shipping this toolset to you with a blank page for the dashboard, we've pre-built a starter set of industry-specific indicators to whet your appetite to the possibilities. Use this 'starter set' right out of the box, modify their formats or create your own additional operating benchmarks. Corporate Vital Signs will come to you with four key indicator categories already set on your dashboard: **Clinical, Financial, Resident and Staffing**. Each category contains four related indicators to get you started, but others can easily be created and deployed. Corporate Vital Signs is a web-based tool so it can be accessed by remote users from anywhere, any time without logging into our core LTC software.

### Corporate Vital Signs Highlights

#### Easy to Use

- Colored gauges visually display results
- Simple clicks to drill down to detail
- Extracts data and builds results based on your existing databases
- Easy to use English labels to create ad hoc reports on the fly
- Simple web access for corporations with numerous remote users

#### Powerful Business Tool

- Eliminates re-keying of data into company spreadsheets
- Triggers indicators based on company defined benchmarks
- Compares results over time
- Delivers comparisons across regions and facilities

- Sends automatic alerts when results are outside baseline
