

## TruBridge Business Intelligence Dashboard and Self-Service Reporting

# Can you determine value from your data?

You already have the data. It's what you do with it that creates value for your organization.

But several factors, including expertise and manpower, along with the sheer volume of data, can delay or halt your informed decision-making process. With the TruBridge Business Intelligence Dashboard, the information you need is just a click away. This powerful analytics tool leverages the collective strengths of the CPSI family of companies by utilizing the integrated data you already compile through your EHR solution.

- Improve your decision making
- Turn data into actionable insights
- Accurate business observations
- Significantly reduce printing hard copy reports

### > PRODUCT BENEFITS:

- Critical business analytics
- Complete EHR integration
- Customizable dashboards with intuitive drill-down graphs
- Includes key performance indicators targeting industry regulations like PDPM and beyond.

### > PRODUCT EXPERIENCE:

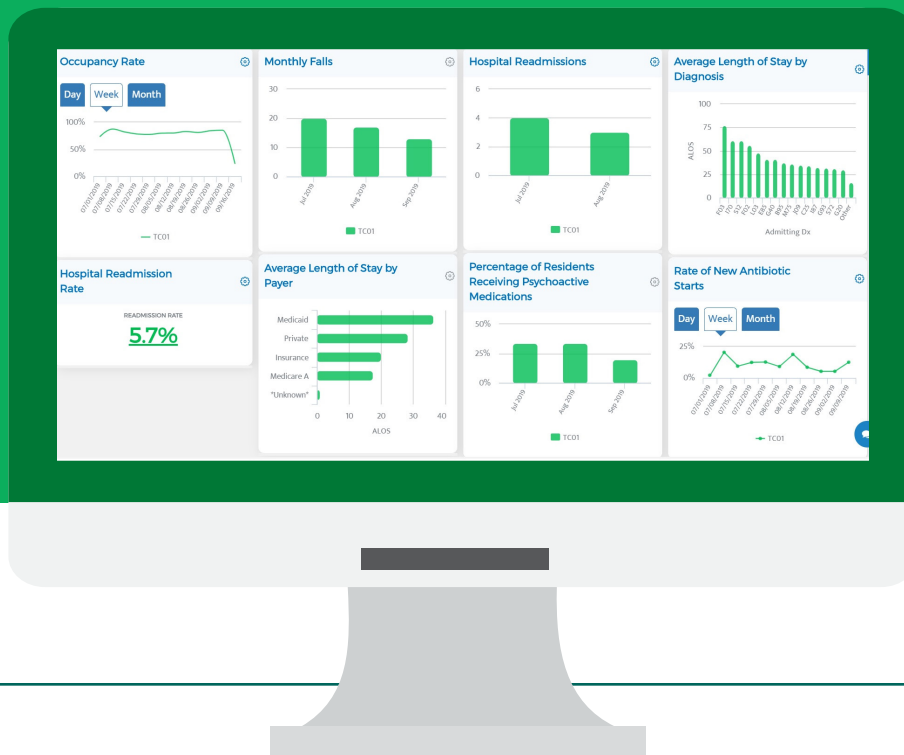

- Requires no additional logins; embedded in AHT.
- User-defined dashboards are easy to configure, customize and store.
- Visually appealing and intuitive panels containing financial, operational, and clinical information.
- Customizable filters and drill-down functionality makes evaluating data quicker and more effective.

“

Our team is really enjoying the fully integrated, customization available with TruBridge Business Intelligence and Self Reporting. The customization options allow our staff to generate reports based on our wants and needs. Whether it's for a weekly CHF Clinical meetings or even Quality Reporting, we can now run one customized report that has everything. That report is right in the system and ready to use with just one click! This is the best reporting software we've used to date.

”

—Chris Read, RN, Informatics Nurse Specialist  
Cedars Nursing Care Center

## > SELF-SERVICE REPORTING:

- Create, schedule and distribute user-defined reports beyond the dashboards and stock reports.
- Obtain valuable clinical and operational information in a timely manner.
- Produce sophisticated information requests from AHT data.
