

Care Management

American
HealthTech®

Manage the delivery of quality care, collect and report on resident information, and manage compliance risk with this integrated suite of products.

Long-term solutions that lead to your LTC success

American HealthTech helps skilled nursing facilities like yours to navigate the ever-changing regulatory environment and get a handle on your bottom line today, while supporting your long-term growth for tomorrow.

Our comprehensive, integrated EHR solutions deliver a seamless flow of information between the resident care, coding and billing, and financial management functions.

That's what you can expect from a leading provider for LTC with 30+ years of industry insight. Even better, it's 100% backed by dedicated support and service.

The skilled nursing setting is one of the most challenging when it comes to providing consistent, quality care as the needs of your residents are unique and often complicated.

That's why you need a comprehensive documentation process that can provide your care team with clear, accurate, and up-to-the-minute resident treatment information as well as support your billing and reporting purposes.

The Big Picture

The Care Management solution from American HealthTech streamlines the clinical workflow while capturing information needed for billing, reporting, and regulatory compliance. It successfully:

- **Provides comprehensive functionality that is completely integrated** offering a seamless flow of real-time data that eliminates costly re-keying and helps support efficient delivery of care.
- **Offers ease of use to busy clinicians** because it's configurable to their workflow, helping ensure you get the most out of your investment.
- **Promotes collaboration among the members of your interdisciplinary team**, empowering them with the time-sensitive information they need to make vital care decisions.

Take a closer look

The AHT Care Management solution features a number of applications to help you better find, track, and update resident information, enhance the quality of resident care, and expand efficiencies throughout your organization.

CLINICAL

AHT Clinical helps you manage the electronic health record (EHR) for your residents, offering comprehensive clinical documentation and quality assurance tools to help the care team work efficiently, support regulatory compliance, and provide excellent care.

SMART CHARTING

Implemented at the point of care, this smart application allows the care team to document comprehensive resident information that is accessible from throughout the entire AHT solution.

ORDER ADMINISTRATION

This application is also implemented at the point of care and offers electronic medication and treatment administration record (eMAR/eTAR) management that is integrated with the entire AHT Care Management solution.

USER INTERFACE

This innovative application presents essential resident information in a way that will make it easy for care teams to effectively evaluate—and plan care for—your residents. The My Story timeline offers a chronological view of each resident's history while that resident is in your facility. AHT's user interface was built to support physician mobility, so it can be accessed anywhere from a supported web browser and allows orders to be signed electronically.

ePRESCRIBING

Powered by the Rcopia product from DrFirst and integrated into the clinical workflow, ePrescribing allows providers to electronically prescribe medications—including controlled substances—efficiently. Interaction checking and a more structured sign-off process help protect residents from inadvertent medication errors.

QUALITY ASSURANCE

In today's outcomes-driven world of healthcare, your ability to continuously improve quality is mission critical. AHT Quality Assurance consolidates key information from across your clinical operations, helping you make sound, fact-based, and proactive decisions with current information.

THERAPY TRACKING

This application will help ensure that you're reporting on—and getting compensated for—all of the therapy services being provided to your residents. You'll be able to: track therapist productivity and non-billable time; convert therapist service logs into the appropriate accounts receivable unit types for billing; manage physician orders, treatment plans, goals, procedures and therapy progress notes.

SUPPLIES TRACKING

Count on this application to help make sure you're getting paid correctly for the supplies being used for resident care. Among other things, you'll be able to: set markup amounts and billing transfer settings; set supply information like cost and reorder information; easily dispense, receive, and transfer supply items.

DISEASE MANAGEMENT

Given the acuity level and complexity associated with skilled nursing residents—the average resident has one primary disease and up to eight secondary diseases—the need for powerful disease management tools is paramount. Integrated with the AHT clinical workflow and powered by COMS Daylight IQ™, this application will help your care team manage resident diseases and changes in condition.
