

Order Administration

American
HealthTech®

Your Edge with Integration

The need for rigorous control of orders is essential for quality outcomes and quality of life for residents. It's also key to reducing adverse drug events and related hospital readmissions.

Order Administration was designed for clinicians by clinicians. Collaborative workflows take the safety and efficiency of managing medications, special requirements, and more – to new heights.

- Empowers interdisciplinary team with centralized, 360° view of resident health.
- Enables multitasking: document ADLs, incidents, medications – on any computer.

> PRODUCT BENEFITS:

- Addresses adverse event and improves compliance. eMAR cuts 2-4 days nurses spend reconciling orders every month.
- Puts extensive detail in front of nurses managing orders, including a photograph, last vitals, allergies, special needs, physician, and more.
- With the average resident on eight or more medications per day, fast, accurate, timely delivery of orders and treatments for residents is mission critical. Your reputation and revenues depend on it.

> PRODUCT EXPERIENCE:

- Monitor how drugs are tolerated or refused over time.
- Prompt for infection control with antibiotic orders.
- Optional pharmacy interoperability takes efficiency to new heights.
- Deliver person-centered care at its finest with special requirements: create personalized ones, use a stock set or add to a library.

“

We have slain the fax eating gremlins. When the pharmacy receives the order, nurses see it in the electronic charts instantly.

— Pamela Duncan, Chief Compliance Officer
Agape Senior
