

Powering a healthy revenue cycle

Experience Revenue Cycle Success with American HealthTech and TruBridge

With constant change in the skilled nursing field, revenue cycle success becomes more important. TruBridge offers a powerful suite of revenue cycle management tools that fully integrates into American HealthTech. As a fellow member the CPSI family of companies, TruBridge is the only RCM solution that offers this level of integration, which allows you to optimize revenue cycle efficiency and improve cash flow.

The Power of an Integrated Revenue Cycle Solution

From eligibility verification to a single solution for billing and more, there are many reasons why integrating TruBridge with AHT empowers your facility to do more.

Single, Integrated Billing Solution – Claims are automatically sent from AHT to TruBridge without manual intervention, freeing up valuable time for your staff. With TruBridge you train your staff on one system and eliminate the need to maintain separate login credentials for insurance payers.

Eligibility Verification – TruBridge simplifies the admission process with the ability to check eligibility prior to admission for all insurance payers, including Medicare/Managed Care. Take verification to the next level by verifying eligibility on current residents to identify any changes, and do everything without the need to go from payer to payer to find the information you need.

Additional Functionality – Not only will TruBridge help improve your billing and eligibility verification, it includes many additional features that will help on a variety of levels.

- Automated secondary billing and shadow claims
- Electronic submission of medical documents
- Custom claim edits
- Dashboards, reporting and scheduled reports
- Claim status lookup
- Single sign-on between AHT and TruBridge

Preferred Care is one of the country's largest senior care providers, with more than 100 skilled nursing, assisted and independent living centers in 12 states, including 38 locations across Texas.

“Before TruBridge RCM, our biggest challenge was cash flow. We didn't have time or resources to track our claims. There are payment alerts to let us know when a payer exceeds their terms. It's reduced the time it takes to audit an account and it's increased our cash flow.”
