

RESULTS:

- From the first point of contact with a potential resident, the Annandale team is able to start capturing data into the AHT Senior Living Solution Powered By ALIS, creating profiles, reserving rooms, completing documentation and assessments, all prior to move in – all of which transfers over to clinical with the click of a button.
- Annandale Village provides seamless care transitions and enterprise oversight with the AHT Senior Living Solution Powered By ALIS, as the modules are always in constant communication with one another, ensuring consistent and accurate information company-wide.
- When care is provided at Annandale, the AHT Senior Living Solution Powered By ALIS also ensures it's seamlessly billed. If there is an assessed change in condition, it is also automatically communicated to the resident's bill.

Connected Health, No Longer Disruptive With American HealthTech Senior Living Solution Powered by ALIS

Annandale Village monitors and manages the health of its diverse organization with one integrated solution.

What comes to mind when you hear the word 'software?'

- Lightening your workload so you can spend more time with patients.
- Getting things done more quickly.
- Adding efficiency to a long process.

Yes, software enables all of these things. But for Annandale Village, an award-winning organization that provides progressive life assistance to adults with developmental disabilities and acquired brain injuries, it's so much more. It's about people. The people who created it; the people who use it to solve problems; and the people who need it to care for others. It takes a village to care, and no one knows this better than Annandale Village. For Annandale Villagers, 'care' means maximizing their abilities and maintaining their independence in the least restrictive environment. For the staff, it means needing a solution that supports their day-to-day care initiatives and helps their facility run smoothly. Their solution was American HealthTech.

A Unique EHR Solution for a Unique, Diverse Care Corporation

Annandale Village's goals for its EHR were simple and straightforward: Manage an accurate census, enable electronic incident tracking, and allow case managers to see all of the Villagers' activities in one place.

But the problem was tough: Not having **ONE** solution that met the specific needs of each setting.

"We wanted to manage an accurate census, enable electronic incident tracking and allow our case managers to see all of the Villagers' activities in one place," said Adam Pomeranz, Chief Executive Officer for Annandale Village. "The problem was not having one solution that met all of these goals. We were trying to manage from multiple spreadsheets, which quickly got out of control. So we started shopping for solutions."

“After taking a serious look, we realized that AHT could provide us with all of the visibility we needed throughout our campus – from prospecting to care planning and billing between care settings.

“It’s also easy to use and simple to deploy since it’s web-based. And it’s affordable. It met all of our goals.

Annandale Village.*

Compounding the challenge was the fact that Annandale is a truly unique post-acute care organization. It serves both young and old throughout different care settings and across different communities. So the organization needed a unique solution that could match the diversity in its care model.

Enter the AHT Senior Living Solution Powered by ALIS

AHT approached Annandale with its new Senior Living Solution, powered by ALIS, to provide information from prospecting to care planning and care management to seamless transitions and billing between care settings.

“Because Annandale is such a unique organization, they needed a solution that works across different settings and communities,” said Claire Stephens, Vice President of Client Services for American HealthTech. “That’s why I approached them about our new Senior Living Solution, powered by ALIS.”

“After taking a serious look, we realized that AHT could provide us with all of the visibility we needed throughout our campus – from prospecting to care planning and billing between care settings,” said Laura Gourley, Chief Financial Officer for Annandale Village. “It’s also easy to use and simple to deploy since it’s web-based. And it’s affordable. It met all of our goals.”

“We met with the leadership team and everyone was excited about having one source of information with integration to their SNF for seamless care transitions,” notes John Shafae, President of ALIS by Medtelligent. “They’re also looking forward to using the family portal, ALIS Connect. Annandale’s Villagers are younger and have a tremendous amount of family engagement. So this will bring more communication to everyone.”

The result? Annandale leadership now has one source of information to manage census, track incident reports electronically, while having full integration with their SNF for seamless care transitions. Care managers now have full visibility into each Villager’s activities from one place.

Villagers continue to receive the level of care they need to reach their full potential. And AHT connects all the dots with one solution, proving that it does take a village to care and stay ahead of the curve.
